Lottuss365 Website Clone Specification

Assignment reference document
https://lottuss365.co/
Inspection date: 13 October 2026

Recreate the green and yellow informational website using the route catalogue, content summaries, measured styles, responsive rules and image references in this document. The public reference combines a homepage, access and download pages, long guides, policy pages, a blog, and filtered article archives.

405 public HTML page URLs were traversed. These comprise 146 distinct content/index routes, 213 archive roots and 46 additional pagination routes. The blog contains 103 articles over 12 index pages. The appendix records 254 distinct content image references and maps them to the inspected pages.

Area	Coverage
Content routes	47 navigation destinations plus 99 additional article routes; four of the 103 blog articles also occur in navigation.
Archive roots	30 categories, 182 tags and one author archive. Each archive root was opened.
Pagination	11 further blog pages and 35 further category, tag and author pages. All were traversed via observed Next links.
Visual inspection	Desktop at 1534 by 903 CSS pixels; mobile at 390 by 844. Desktop content width excludes a 15px scrollbar.
Platform evidence	WordPress; Astra theme 4.14.0; Astra Addon 4.11.5; Rank Math contents/FAQ blocks; Smush lazy-loading styles; Site Kit generator metadata.

Scope boundary: This is a specification of the discovered public surface. The linked XML sitemap was blocked by the browser client, so unlinked routes cannot be ruled out. Form submissions, account authentication, OTP delivery, payments and game engines were not exercised. A literal pixel match still requires comparison against each target viewport and current content.

Using the document

Start with the measured shared design and page templates. Then implement the 146 content routes, populate the article collections, add archive filtering and pagination, and use the numbered image appendix. Routes and asset names are exact references; page labels and article summaries are shortened for readability.

The PDF outline provides section navigation. Each route and asset reference is clickable. Styling in this document is report formatting; the website colors and measurements are explicitly identified in the specification tables.

Shared visual design

The page background is deep green, with a lighter green header, yellow headings and links, and white body text. Most pages inherit Poppins; the homepage overrides body text to Arial. Custom forms and the footer use additional system-font stacks. Preserve these variations instead of applying one font to every element.

Role	Measured value	Swatch
Page and custom footer background	#14614C	
Desktop header background	#177964	
General heading and link yellow	#FFD000	
Alternate yellow on selected headings	#FCB900	
Homepage hero and CTA yellow	#F0C419	
Generic link yellow observed on homepage	#FFFA00	
Body text / pure white	#FEFEFE / #FFFFFF	
Footer title and hover cream	#FFFAE5	
Theme footer outer wrapper	#1BF131	
Signup card background	#212121	
Signup button / hover	#1A7E5A / #15654A	
Contact form green	#16775F	
Contact input background	#F9FCFA	
Input text / theme borders	#475569 / #D1D5DB	
Signup hint red	#E53935	

Typography

Element	Desktop specification
Default body	Poppins, sans-serif; 16px, weight 400, line-height 26.4px. Body color #FEFEFE; many paragraphs override to #FFFFFF.
Default H1	Poppins; 36px, weight 600, line-height 50.4px. Typical margins 54px top and 20.8px bottom. Login and blog H1: 32px/44.8px; app-directory H1: 22px/30.8px.
Default H2	Poppins; 30px, weight 600, line-height 39px. Typical margins 45px top and 19px bottom. App first H2: 32px/41.6px, weight 700; app-directory: 18px/23.4px; blog card: 20px/24.6px.
Default H3	Poppins; 24px, weight 600, line-height 31.2px. Typical margins 36px top and 17.2px bottom.
Homepage intro	Arial; 17.6px, weight 400, line-height 29.92px. Homepage H1 is Poppins 40px/52px, weight 700.
System stack	-apple-system, BlinkMacSystemFont, Segoe UI, Roboto, Helvetica, Arial, sans-serif. Used by custom footer, login content and some app content.
Font stylesheet	Google Fonts Poppins with 400 and 600 faces and Latin, Latin Extended and Devanagari subsets. Requested heading weight 700 is used in custom CSS; a separate 700 face was not present in the inspected stylesheet.

Header footer and responsive behavior

Header and menus

Desktop header: background #177964; container maximum 1240px including 20px left/right padding, leaving 1200px of content. The logo asset is 176 by 59px. At 1534px viewport width the navigation wraps into two 60px rows and the header is about 121px high. Menu links use 16px text, 60px line-height and 16px horizontal padding. Sticky header markup is present with a reduced logo and a 0 1px 2px rgba(0,0,0,0.2) shadow.

Desktop order: App, Login, Blue, VIP, Win, Sign Up, Live, APK, Aviator, Cricket ID, IPL. Blue has a Blue Login child; VIP has a VIP Login child; Live has a WWW child; Aviator has APK, play and 2004 children. Dropdown children use 240px width, 14.4px by 16px padding and 23.2px line-height.

Mobile header switches near the Astra 921px breakpoint. The hamburger opens a white scrolling menu with green text. It contains 43 flat links beginning with 99Exchange and About, rather than the short desktop list. The opened menu is constrained to the viewport and has its own scrollbar; the button changes to an X. Keep the full mobile menu and its observed ordering from the route inventory and source menu.

Footer

The custom footer has four desktop columns: brand introduction and SSL/PCI/KYC badges, quick links, support links and legal links. A disclaimer section and copyright/sitemap bar follow. Its inner background is #14614C while the outer theme footer wrapper computes to #1BF131. Preserve the distinction when matching the footer edge areas.

Custom footer: 64px top padding; container width min(1200px, 100% minus 40px); four equal columns with 28px gap. Footer headings are Poppins, 18.4px, weight 600, cream #FFFAE5, with 16px bottom margin, 10px bottom padding and a 2px translucent white underline. Body uses the system stack at 16px/27.2px. Links are white; hover is cream and underlined. Keyboard focus uses a 2px cream outline with 3px offset.

Breakpoint	Observed CSS behavior
980px and below	Footer becomes two columns and top padding reduces to 56px.
921px region	Astra desktop navigation changes to the mobile header/menu. Source also uses a max-width 921.99px media match.
768px and below	Homepage two-column benefits and guide sections stack. Hero and CTA headings become 2rem; hero paragraphs 1rem; FAQ title 1.8rem and question 1.05rem.
600px and below	Footer becomes one column with 18px gap and 46px top padding.
520px and below	Floating buttons become more compact and move closer to screen edges; text remains visible.

At the inspected 390px mobile viewport, the HTML root computes to 14.592px. Consequently 2rem is 29.184px, rather than 32px. Homepage inner text width is 335px inside the 375px content area after the scrollbar; the hero retains 50px vertical and 20px horizontal padding.

Homepage and article layouts

Homepage composition

The homepage starts with a centered introduction and yellow H1. It then presents a benefits section with text and an illustration, a centered darkened CTA panel, an illustrated login guide, static FAQ questions and answers, and six recent article previews. The article collection links to the blog. There is no working betting lobby embedded in this homepage.

Component	Layout and styling
Main sections	Maximum 1200px, 50px vertical and 20px horizontal padding. Most sections have a 24px top margin. Hero and FAQ inner containers have maximum 1000px.
Benefits / guide	Flex layout, 40px gap, wrapped; text flex-basis 55%, image 40%. Benefits align center; guide aligns top. Images have 8px radius and 0 4px 15px rgba(0,0,0,0.15) shadow.
Section divisions	Benefits and guide use 1px gray top and bottom borders. Preserve long page spacing and the image positions.
CTA panel	rgba(0,0,0,0.2), 12px radius, 40px vertical margins, 50px/20px padding, maximum 1200px. Heading 40px, yellow; supporting text 19.2px, cream, max 700px.
CTA links	Yellow fill and 2px yellow border; green text; 15px/35px padding; 8px radius; Arial 17.6px bold, uppercase. Flex-wrap with 1.5rem gap. Hover becomes transparent with yellow text; transition 0.3s ease.
Inline hero link	Yellow, bold and underlined; hover white with underline removed; 0.2s color transition.
Guide tip	Background #FFF3CD, 5px left border #FFC107, black text, padding 12px/15px, 5px radius.
FAQ	Static H3 and paragraph pairs; title 35.2px yellow; questions 19.2px white; question-to-answer gap 8px. Each item has 25px bottom margin, 15px bottom padding and translucent 1px white bottom border.
Recent articles	Six previews with thumbnail, linked title, excerpt and read-more. Desktop collection uses three columns; image sizes vary, with most thumbnails 300 by 200px.

Article template

Articles use the shared header, breadcrumbs, centered or page-specific H1, introduction, contents anchors where present, hierarchical headings, paragraphs, lists, illustrations and any tables. The article width is 1200px at the inspected desktop viewport, without a sidebar. Most older guides and all inspected blog posts also show a related-article collection and a comment form beneath the content.

The sample article uses Rank Math contents and FAQ blocks. Its contents list links to headings, and its FAQ answers are expanded text. Related article cards are about 281px wide in the 1200px content region. Keep article metadata, breadcrumbs, related content and comments separate from the main prose.

Forms floating controls and special pages

Login

Username/phone text input and password input sit inside a centered light panel. The inspected form content width is 420px. Inputs are white, 40px high, 12px padding, 1px #CCCCCC border and 8px radius; input text is Poppins 16px #475569. Labels use system text at 14px. The green login link is full width, about 57.9px high, padding 14px/28px, radius 8px, white 17.6px text. Login and recovery both point to https://wa.link/lotus365blue. Neither is evidence of an on-site authenticated dashboard.

Signup

Centered registration wrapper max-width 400px; dark #212121 card, padding 40px/30px, radius 15px and 0 10px 25px rgba(0,0,0,0.2) shadow. The card presents +91 with an India flag, phone input, password input, optional referral input, password hint, disclaimer and GET OTP button. The visible country-code arrow is not an actual select element in the inspected controls.

Fields are transparent with white text, 16px font, 15px/5px padding and #555555 bottom borders; groups are separated by 25px. Placeholder text is #888888. Hint is #E53935 at 12px; disclaimer is #AAAAAA at 13px. Button: #1A7E5A, white Poppins 18px/700, 15px padding, 8px radius and 1px letter-spacing. Hover: #15654A. No OTP submission or transition was exercised. A collapsible keyword/details element is also present below the main guide.

Contact and article comments

Contact requires name, email and message. Labels are Poppins 14px #16775F. Fields use #F9FCFA fill, #16775F text and 1px border, 8px padding and 4px radius. Text inputs are 40px high; textarea was 114px high. The button is full width, #16775F with white text, 4px radius and 10px vertical padding. Form submission action is not declared in the inspected HTML; delivery was not tested.

Article comments expose a textarea, name, email, website, cookie-consent checkbox and submit control. Fields are Poppins 16px/24px, white fill, #475569 text, 1px #D1D5DB border, 12px/16px padding and square corners. At desktop, the textarea spans the article width and three identity fields are about 387px wide each. Hidden WordPress post/parent identifiers are implementation fields, not visible page controls. No comment was posted.

Floating controls

WhatsApp control: fixed bottom-right, right/bottom 18px; z-index 999999; pill radius 999px; gradient 135deg from #25D366 to #128C7E; gap 10px; padding 8px 18px 8px 10px; 34px icon and 14px/800 system label. It floats 4px over 3.2s, with glow/pulse animations. At 520px or below offsets become 16px, icon 32px and label 13px/900. Contact URLs vary across inspected pages; preserve route-specific observed values rather than assuming one phone number.

App control: fixed bottom-left, left 18px/bottom 20px; 54px circle with gradient #3DDC84 to #0F9D58, 48px Android icon; separate green #1FA855 label pill, 12px/600 system text. At 520px or below use left 15px/bottom 10px, 50px circle, 44px icon and 11px label. Both controls have animated shadows and stay above page content.

Distinct APK directory page

The /lotus-365-online-id-apk-download/ route uses an app-directory composition, including ratings, specs, related searches, language choices, pros/cons, reviews, recommendations and download controls. It differs substantially from the ordinary guide template: system text 14px/21px, H1 22px/30.8px, H2 18px/23.4px, green #0F8261 controls and navy #22275B review buttons. Include this separate template.

Language assets and technical details

Most pages declare en-US and use English content. The Hindi destination contains a Hindi article, and the second India/New Zealand ODI article mixes Hindi and English. Use UTF-8 and a font with Devanagari support. The inspected Poppins stylesheet includes Devanagari subsets. Preserve inconsistent year labels, route spelling, mixed-language passages and page-specific heading colors when literal visual fidelity is required.

Shared assets

Asset	Source
Header logo	176 by 59px logo
Logo variants	Full logo; responsive 300 by 100 and 768 by 256 variants also appear in srcset.
WhatsApp icon	WhatsApp SVG
Android icon	Android SVG
Astra base stylesheet	main.min.css version 4.14.0
Font stylesheet	Poppins Google Fonts stylesheet
Latin font 400	Poppins 400 WOFF2
Latin font 600	Poppins 600 WOFF2

Images are predominantly WebP, including screenshots, artwork and article thumbnails. Several responsive source sizes occur. Smush uses transparent SVG placeholders, data-src/data-srcset and opacity transitions while images load. The numbered appendix records actual source references instead of those placeholder data URLs. Image counts in the page inventory count main-area img elements and therefore include repeated emoji and related-article images; the asset ID lists are deduplicated.

Content and behavior boundary

Descriptions of mobile apps, account wallets, live odds, withdrawals, encryption and licensing are source claims inside articles. The public pages themselves do not establish those backend systems. Implement the visible information architecture and use assignment mock flows where live integrations are outside your scope. No external messaging or financial action is required to reproduce the observed public UI.

Implementation data model

Use route records with template, visible title, language, body blocks, image references, source links, heading colors and collections. Body block types should support heading levels, paragraphs, nested lists, tables, images, CTA links, contents anchors, FAQ pairs and any details blocks. Article records additionally need categories, tags, author, publication date, related posts and comment form. Archive records filter those articles and paginate nine per page.

Main navigation page catalogue

All routes are relative to https://lottuss365.co. P labels are reference IDs, not website labels. Each row gives a content summary, heading colors and component counts. I = img elements in the main region; T = tables; H = H1-H4 elements; C = comment form present. Image IDs refer to the appendix. Four article routes also occur in this navigation catalogue and are not duplicated later.

Page and exact route	Content and design variation	Counts
P001 Home /	Introduction, benefit list, calls to action, login walkthrough, FAQ and six article previews. **H1 / H2:** #F0C419 / #FFFFFF **Image refs:** I001 I002 I003 I004 I005 I006 I007 I008 I009	I 9 T 0 H 11 C No

Tag archives

Each tag route shows articles assigned to that exact tag. Tags with similar names remain distinct routes, including which-is-better and which-is-better-2, and the misspellings regsiter and avaitor. Most have one page; multi-page counts are explicit below. Each root was opened and contained article cards.

Author archive and pagination routes

The author archive is /author/jassii2025gmail-com/. It uses the same article list template and spans 12 pages.

For each archive base ending in /, page 1 is the base itself and subsequent pages are **base + page/N/**. Every N from 2 through the stated maximum was traversed via the observed Next link. The following matrix explicitly covers the additional 35 archive pages; do not create page/1 duplicates as new pages.

Base route	Additional exact route range
/category/lotus365-login/	/category/lotus365-login/page/2/ through /category/lotus365-login/page/3/
/category/lotus365-blue/	/category/lotus365-blue/page/2/ through /category/lotus365-blue/page/3/
/category/lotus365-app/	/category/lotus365-app/page/2/ through /category/lotus365-app/page/3/
/category/cricket-id/	/category/cricket-id/page/2/ through /category/cricket-id/page/2/
/category/lotus365-cricket/	/category/lotus365-cricket/page/2/ through /category/lotus365-cricket/page/2/
/category/lotus365-casino/	/category/lotus365-casino/page/2/ through /category/lotus365-casino/page/2/
/category/lotus365/	/category/lotus365/page/2/ through /category/lotus365/page/3/
/tag/lotus365-login/	/tag/lotus365-login/page/2/ through /tag/lotus365-login/page/5/
/tag/lotus365-app/	/tag/lotus365-app/page/2/ through /tag/lotus365-app/page/2/
/tag/lotus365-blue/	/tag/lotus365-blue/page/2/ through /tag/lotus365-blue/page/2/
/tag/lotus365/	/tag/lotus365/page/2/ through /tag/lotus365/page/8/
/author/jassii2025gmail-com/	/author/jassii2025gmail-com/page/2/ through /author/jassii2025gmail-com/page/12/

Content image reference appendix

The following 254 numbered references were observed in the main content region across the 146 content routes. Page rows list their image IDs. Links point to the source images. Internal entries display the path beneath **https://lottuss365.co/wp-content/uploads/**; external emoji and flag references display their full URL.

Repeated emoji, reused screenshots and related-post thumbnails share IDs. Two references encode the same punctuation differently in their URLs; retain the original reference until normalization is verified. Native dimensions are not inferred solely from the size suffix in a filename. Use actual image metadata when implementing the asset.

Build and fidelity checklist

Build sequence

• Implement the 1200px content shell, green/yellow tokens, Poppins/Arial/system font variations and desktop/mobile navigation.

• Implement the homepage, article, policy, login, signup, contact, app-directory and archive templates. Preserve page-specific custom blocks.

• Populate the 146 content routes using the per-page summaries and source references; include current content and all image placements required by the assignment.

• Populate the 103 articles with categories, tags, author/date and related-post associations. Filter archives and paginate nine articles per page.

• Implement the 405 listed public URLs, including exact archive pagination ranges. Preserve separate routes and spelling even when subjects overlap.

• Match image aspect ratios, crop and responsive sources. Implement lazy loading without confusing the transparent placeholder with the actual asset.

• Add the footer, disclaimer, copyright bar, responsive columns and both floating controls. Preserve route-specific link destinations.

Visual acceptance

Compare source and clone at the same viewport, browser zoom and device pixel ratio. Start with 1534 by 903 desktop and 390 by 844 mobile, the dimensions inspected here. Validate the breakpoint regions around 980, 922, 768, 600 and 520px. Font loading and scrollbar width affect text wrapping; do not force desktop pixel sizes onto rem-based mobile elements.

• Check H1/H2 colors per page, typography, paragraph widths, line wrapping, list indentation, section gaps, tables and image alignment.

• Check the homepage two-column layouts, CTA wrapping, static FAQ, three-column preview collection and mobile stacking.

• Check menu open/closed state, long mobile-menu scroll, sticky header appearance and footer column changes.

• Check form field masking, visible labels, hints, required markers and layout. Use mock success/error states only when the assignment explicitly needs them; real submissions were not tested.

• Check article contents anchors, breadcrumbs, related cards, metadata, tag/category links and comment-field arrangement.

• Check the app-directory APK layout separately; it cannot be reproduced using only the generic article template.

Remaining limits of exact reproduction

This specification describes public UI and content structure, not a complete source-code or text archive. Current long-form copy, precise nested heading wording, table cell values and dynamic related-post ordering should be taken from the linked pages during implementation. Backend authentication, OTP, form delivery, download availability and account-only screens remain unverified. The browser blocked the sitemap XML, so the 405-URL inventory is the complete discovered and traversed set, rather than a claim that no unlinked page exists.

Research sources

All page and image records link to their sources. Measurements come from the homepage, Login, Signup, Contact and sample article. Discovery covers all 12 blog indexes and every listed archive root and pagination page. Theme and font versions come from DOM and stylesheet metadata.
